## INTEST - Enormous Input Test

Source : http://www.spoj.com/problems/INTEST/

The purpose of this problem is to verify whether the method you are using to read input data is sufficiently fast to handle problems branded with the enormous Input/Output warning. You are expected to be able to process at least 2.5 MB of input data per second at runtime.

## Input

The input begins with two positive integers $\mathrm{n} \mathrm{k}\left(\mathrm{n}, \mathrm{k}<=10^{7}\right)$. The next n lines of input contain one positive integer $t_{i}$, not greater than $10^{9}$, each.

## Output

Write a single integer to output, denoting how many integers $\mathrm{t}_{\mathrm{i}}$ are divisible by k .

## Example

Input:
73
1
51
966369
7
9
999996
11
Output:
4
